ATTN OF: DT-S

SUBJECT: SESSION SUMMARY (C/SS)

TO: DT-S (ATTN: 095)

1. (S-SS) Statistics:	Viewer:	AUG 018
	Session date:	31 88
	Start time:	1032
	End time:	1133
	Mode of operation:	CRV
	PI:	Sinus
	AV:	None

2. (S-SS) Cuing: "Describe the exact target of interest at L".

3. (S-SS) Results:

a. The target of interest is an object which is characterized by a "double-curved" surface (see sketch, page 3). There was a perception that a dull, lustrous metallic "shell" is associated with this object, although I did not specifically perceive it as being an integral part of the object, itself.

b. The target object gave the impression that its main purpose is to protect. This further resolved itself into the impression that the "shell" of the object was more to protect what was outside it than what was inside.

c. There was an overriding attraction toward a part of the site which is related to operations at a sub-atomic level, appearing to specifically deal with "quantum materiality/non-materiality". Along with this attraction was the constant feeling that, while paying attention to it, I was "off target", but I was not able to rid myself of this attraction, which lasted to the end of the session.
